Antarctica and Global Change – What it means to Australians.

John Gunn

Chief Scientist, Australian Antarctic Program

Australian Antarctic Division, Department of Environment, Water, Heritage and the Arts

John Gunn joined the Australian Antarctic Division as the Chief Scientist in January 2009 after a long science leadership career with CSIRO, most recently as the Deputy Chief of their Marine and Atmospheric Research Division. At CSIRO he led a broad portfolio including research into fisheries, aquaculture, oceanography, atmospheric research and climate science.

As Chief Scientist of the Antarctic Program, John has responsibility for setting strategic directions and leading another broad research portfolio, involving scientists from more than 100 institutions across Australia and 28 other countries. John has worked at the interface between fisheries science, management and policy development within Australia and in regional Fisheries Management Organisations for over a decade
